

## InSight - Monitoring the Data Centre

### Key Features

- Single Monitoring and Management Platform for all rack and room environments and for all enabled equipment
- Reliable appliance-built structure monitoring the environment 24 x 7
- Simple but powerful dashboard style graphics with 'traffic light' approach
- SNMP capability
- Records all data monitored for capacity and installation planning (e.g. power loads)
- Powerful reporting functions, either manually or automatically scheduled
- Email/text alerts for alarm conditions and when thresholds are exceeded
- Realtime PUE (Power Usage Effectiveness) calculation
- Trend Analysis functionality
- In-built probes for simple multi-variable monitoring on common devices
- Simple Menu system makes for easy navigation of the platform
- Access to view the system is via standard IE browser across the IP network

The InSight Data Centre Manager is a unique, centralised Platform enabling real-time monitoring and management of all of the disparate environmental systems within the Data Centre. Systems such as:

- Uninterruptible Power Supplies,
- Generators
- Electrical Meters
- Fire Systems
- Air Conditioning units
- IT Rack Power monitoring devices
- Environmental Sensors (e.g. temperature/humidity and water leak detection)

In fact, anything that has either relays or SNMP or both can be linked into this intelligent platform. InSight can receive SNMP traps from devices to signal an error and interrogate equipment to gather detailed information. 24x7, InSight monitors all of the key environmental components and alerts you if any are suspect.

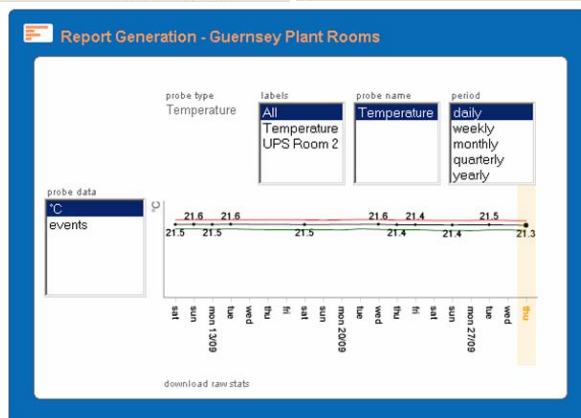

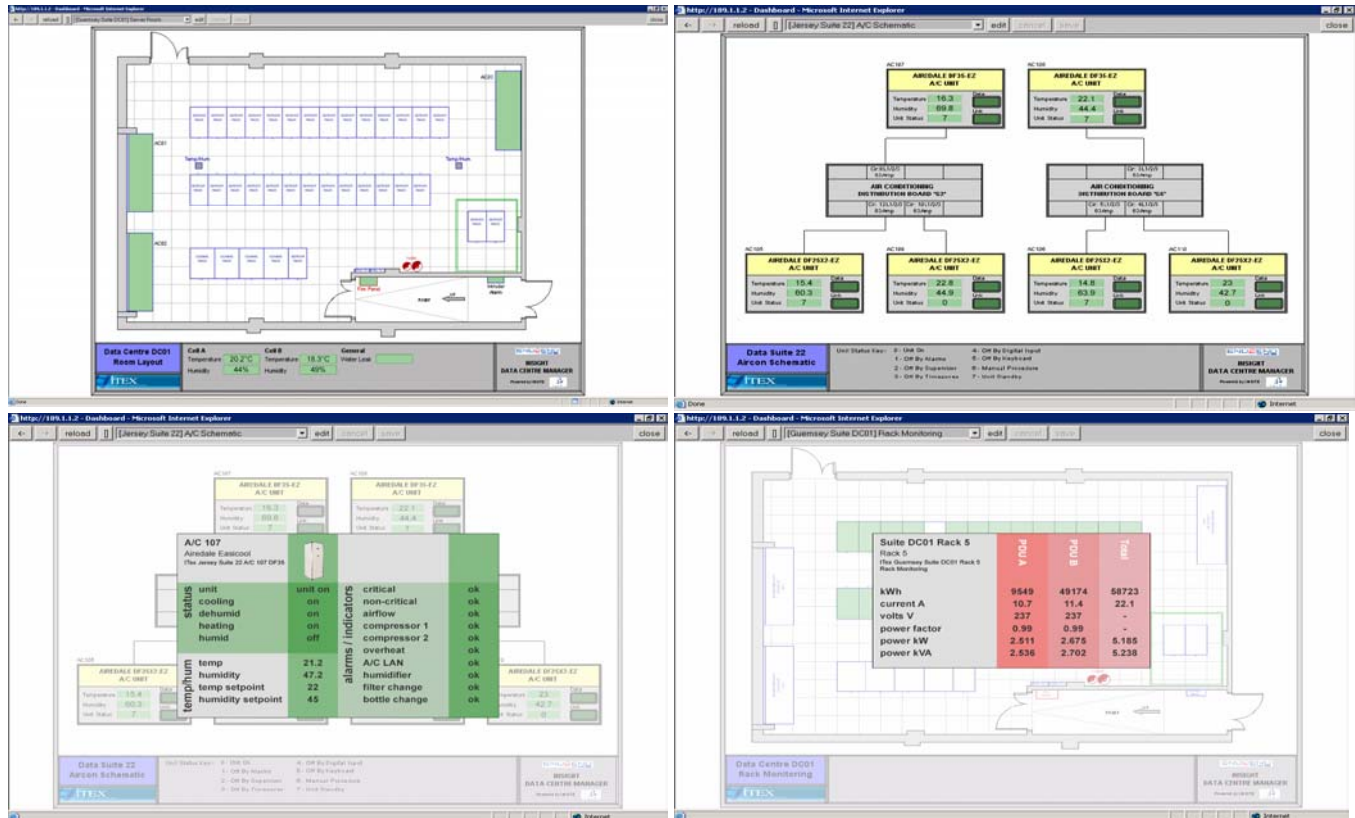

It is a multi-user, multi-faceted solution, combining a centralised monitoring system with powerful recording and reporting features that assist the Data Centre Manager in capacity planning, installation planning, billing and numerous other mission critical activities.

If you only want one monitoring solution for your Data Centre, then InSight is the application for you!

## One Application to put you in Control!

END2END's solution incorporates a central application that can show the status of all of the racks and environmental equipment within the Data Centre. The floor plans, equipment information and reporting is all bespoke and tailored exactly to the customer's requirements. This can be used to alert operations personnel on issues or to provide key information on the operation of the Data Centre. The following shows examples of some of the many possible displays.
